Nozzle Extensions

If you need to direct the misting nozzle away from an object such as a wall or other obstruction, then the nozzle extender will do the job.

This is a simple solution to remedy a problem. The nozzle extender is great for fire pits or landscaping and snaking through a water fall or other yard feature where mist is desired. For mist fog from trees or large plants.

It can be hidden since it is so small and can be painted or just left raw copper and it will patina to a soft green on its own. Nozzle extenders can be made up in any length up to about 8 feet. Available in both 10-24 or 12-24 thread sizes or can be mixed to convert to other thread size.

Mist Nozzle Fitting

A solid brass fitting that will hold one 10-24 nozzle, nozzle cluster or nozzle extension for use with our 1000 PSI black tube. Simply cut tube and push into fitting for a leak free connection.

This fitting works well in landscaping for direct burial with extensions for special landscape effects. Works well in water features to use as a distribution point for several nozzles. Only available in 10-24 threads and 3/8 tube size.

Nozzle Cluster

Five nozzles from one outlet. This fitting can be used on a nozzle outlet or on the end of an extension to create more mist than one nozzle. Or, you can adjust the amount of mist by plugging one or more of the nozzles. Available in
